AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions, and listings, of claims in the application.

1. (Currently Amended) A method for manufacturing a semiconductor device, said method comprising:

forming a stopper film on a semiconductor substrate having a conductive layer therein;

forming an interlayer insulating film on said stopper film, said interlayer insulating film being a low dielectric constant material;

forming a capping film on said interlayer insulating film;

forming a resist film on said capping film, said resist film having a predetermined pattern;

etching said capping film and said interlayer insulating film using said resist film as a mask to form an opening reaching said stopper film;

with said resist film left in place, etching the portion of said stopper film exposed by said opening to form a via hole; and

after forming said via hole, removing said resist film by ashing <u>in a mixture consisting</u> of hydrogen and an inert gas that does not react with hydrogen.

- 2. (Previously Presented) The method as claimed in claim 1, further comprising: forming a barrier metal film on an inner surface of said via hole; and forming a copper layer on said barrier metal film such that said copper layer fills said via hole.
- 3. (Currently Amended) The method as claimed in claim 1, including ashing at a temperature of 200°C to 400°C using a mixture consisting of hydrogen and an, wherein the inert gas is selected from the group consisting of argon and helium.
- 4. (Previously Presented) The method as claimed in claim 3, wherein the volume percent of the hydrogen with respect to the inert gas is 1% to 40%.

- 5. (Previously Presented) The method as claimed in claim 4, wherein the inert gas is argon and the volume percent of the hydrogen with respect to the argon is 10% to 40%.
- 6. (Previously Presented) The method as claimed in claim 4, wherein the inert gas is helium and the volume percent of the hydrogen with respect to the helium is 1% to 30%.
- 7. (Previously Presented) The method as claimed in claim 1, wherein said conductive layer is a copper wiring layer.
- 8. (Previously Presented) The method as claimed in claim 1, wherein said interlayer insulating film is selected from the group consisting of a porous SiO₂ film, a porous SiOC film, and a porous spin on glass film.
- 9. (Previously Presented) The method as claimed in claim 1, wherein said stopper film is selected from the group consisting of an SiC film, an Si_xN_y film, an SiCN film, and an SiOC film.
- 10. (Previously Presented) The method as claimed in claim 1, wherein said capping film is one of an Si_2N_y film.
- 11. (Currently Amended) The method as claimed in claim 2, including ashing at a temperature of 200°C to 400°C-using a mixture consisting of hydrogen and an, wherein the inert gas is selected from the group consisting of argon and helium.
- 12. (Previously Presented) The method as claimed in claim 11, wherein the volume percent of the hydrogen with respect to the inert gas is 1% to 40%.
- 13. (Previously Presented) The method as claimed in claim 12, wherein the inert gas is argon and the volume percent of the hydrogen with respect to the argon is 10% to 40%.

- 14. (Previously Presented) The method as claimed in claim 12, wherein the inert gas is helium and the volume percent of the hydrogen with respect to the helium is 1% to 30%.
- 15. (Previously Presented) The method as claimed in claim 2, wherein said conductive layer is a copper wiring layer.
- 16. (Previously Presented) The method as claimed in claim 3, wherein said conductive layer is a copper wiring layer.
- 17. (Previously Presented) The method as claimed in claim 2, wherein said interlayer insulating film is selected from the group consisting of a porous SiO₂ film, a porous SiOC film, and a porous spin on glass film.
- 18. (Previously Presented) The method as claimed in claim 2, wherein said stopper film is selected from the group consisting of an SiC film, an Si_xN_y film, an SiCN film, and an SiOC film.
- 19. (Previously Presented) The method as claimed in claim 2, wherein said capping film is one of an SiO_2 film and an Si_xN_y film.
